

Hoisting System

Be on your own... lift up your gangway to be undisturbed on board with a hoisting system with carbon spreader and 8 mm rope, weight 1.3 kg.

Teak on walking area

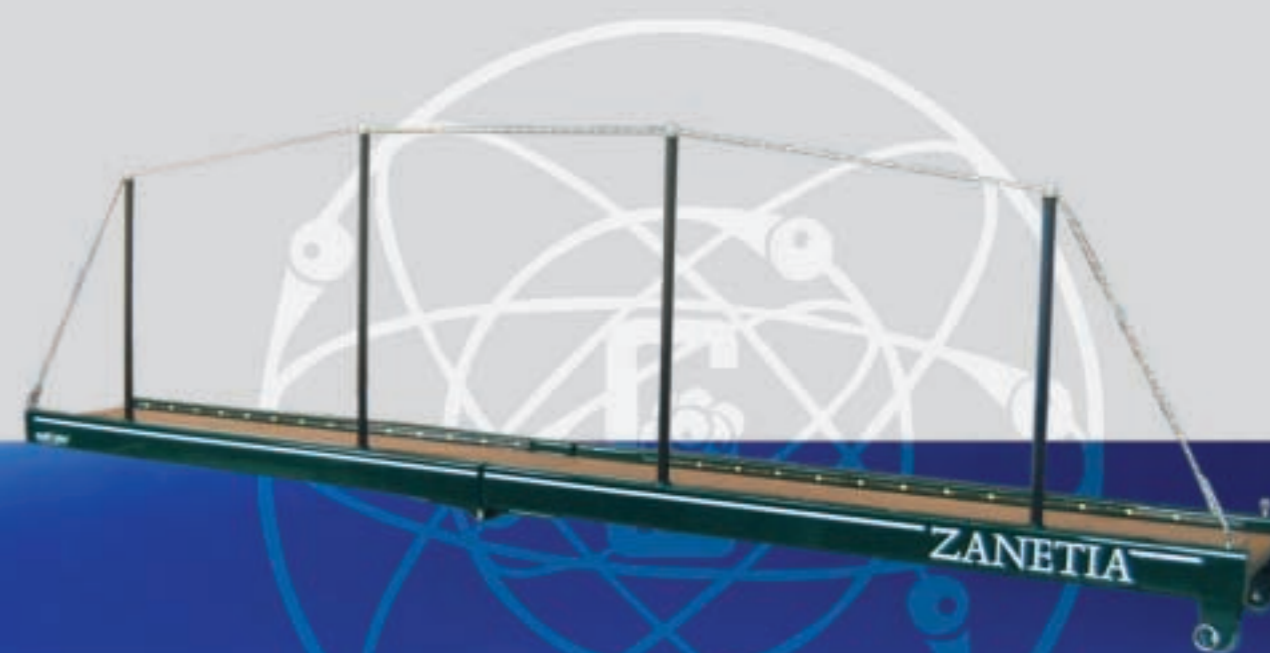

Completely built in black
Covering the walking area with 4 mm teak planked enhances the look.

About us...

We are experts for lightweight custom-made applications made out of high-tech composite materials. Within the last 10 years the multiplex team established a world wide reputation with the development of foldable super light boarding systems made out of 100 % carbon fibre. Further to the boarding systems range the multiplex gmbh is specialised in tailor-made, state of the art composite constructions used among others for the marine- and space industry.

multiplex boarding systems

the multiflap

Your boatname with stripes

Let the gangway and boat form a unified whole: with your boatname on both sides of the gangway they obviously belong together! Colour and style of the letters can be chosen.

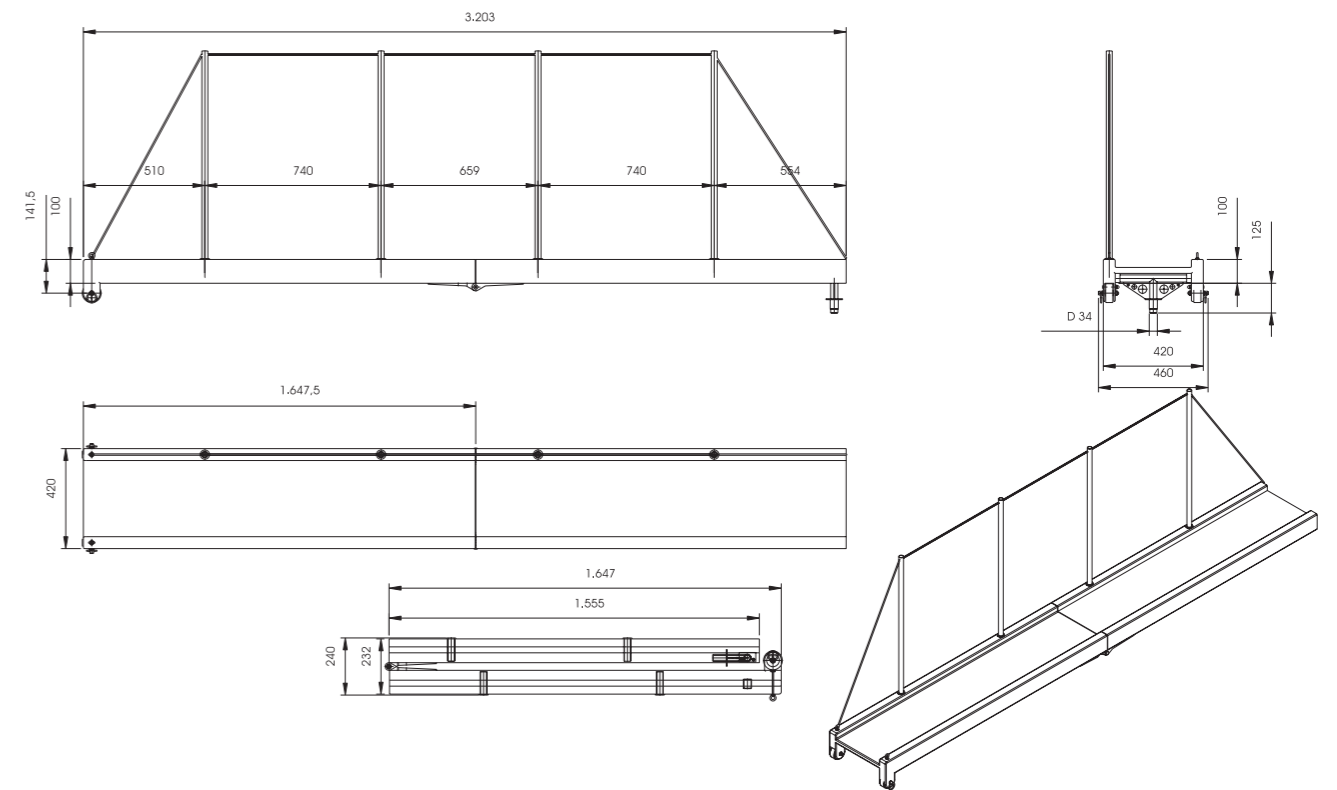

Handrail

An optional handrail has 4 carbon stanchions and a 6mm life line on the portside.

Customized

It's no problem at all to build a customized multiflap with other dimensions. Please do not hesitate to contact us.

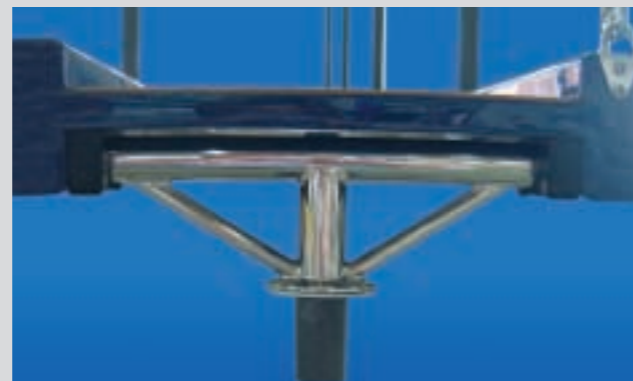

Tubelight

Bridging the transom and the pier at night might be difficult without a light. The strip floor lighting at both sides is a simple and very exclusive eye catcher. Available in 12 V or 24 V this tubelight makes going ashore much easier.

Boardfitting

Boardfitting with a standard diameter of 34 mm incl. plastic sleeve, depth 60 mm.

Teakcovering

A carbon fibre gangway completely covered with 3-4mm teak veneer varnished 13 times with AWL-Grip-Clear varnish adds a jewel to your yacht.

Special design

It's no problem to build a length up to 6 mtr. unfolded and a width up to 900 mm. We manufacture the clients request.

Lined bag

A lined bag for carrying or stowing protects everything against damages.
