

### Economical

The "multistair" is easy and quick dispatchable in three lightweight parts without any tools in seconds. Stuffed bags are an useful and safe option.

### About us...

We are experts for lightweight custom-made applications made out of high-tech composite materials. Within the last 10 years the multiplex team established a world wide reputation with the development of foldable super light boarding systems made out of 100 % carbon fibre.

Further to the boarding systems range the multiplex gmbh is specialised in tailor-made, state of the art composite constructions used among others for the marine- and space industry.

# the multistair

### The multistair

is applicable from horizontal position (0°) to vertical position (90°). For these movements the steps including the lower platform and the handrail are self aligning.

### Alignment

The telescopic struts and knee under the upper platform is individual adjustable with a quick locking system and is needed for alignment of this platform.

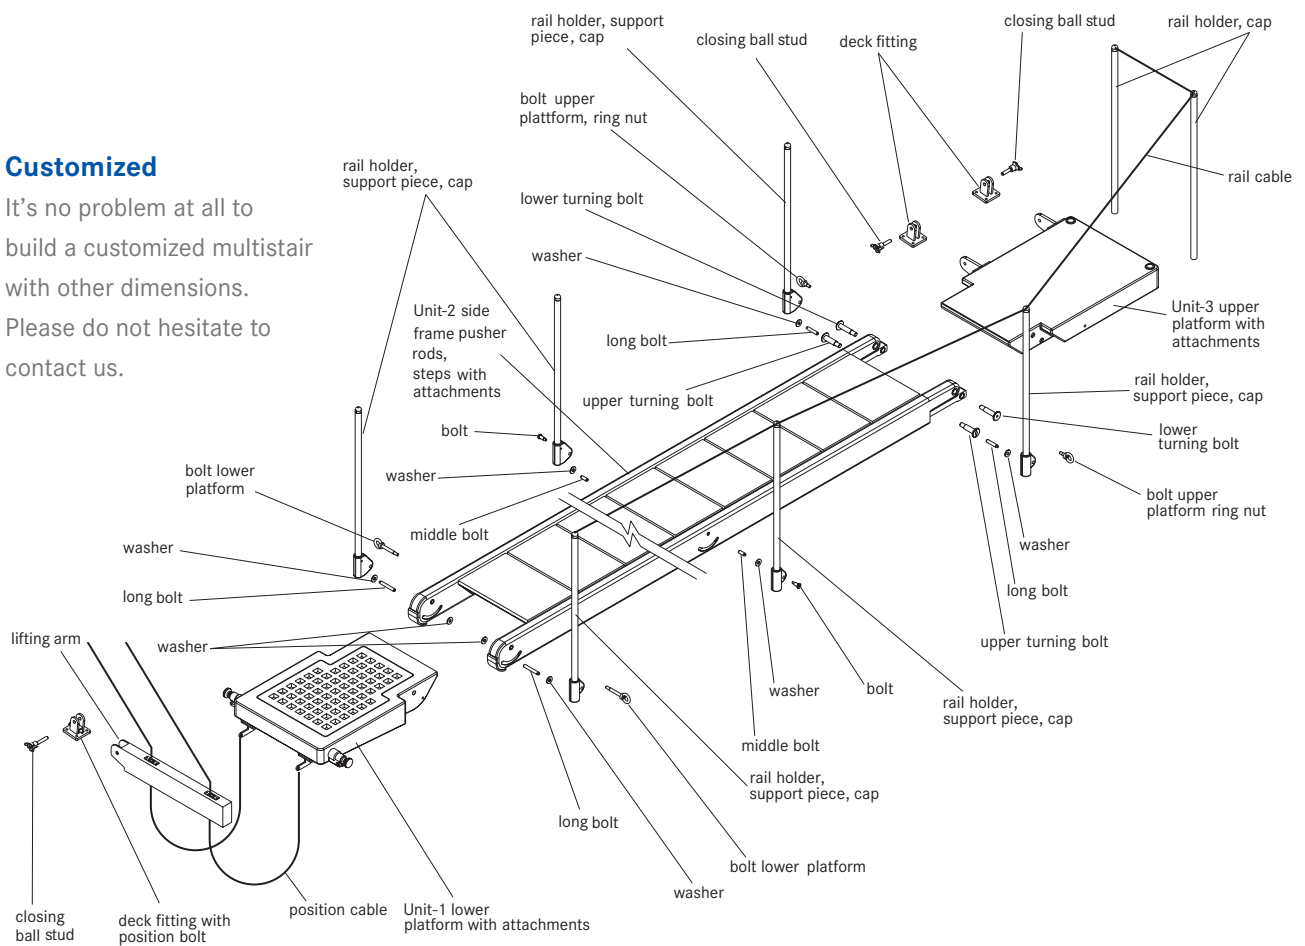

### Distance

The telescopic strut in the side of the lower platform holds a save distance to the hull of the yacht and is adjustable with a quick locking system.

## Customized

It's no problem at all to build a customized multistair with other dimensions. Please do not hesitate to contact us.

## Hoisting and stowing

In case a halyard is not available, a lifting arm is an essential for adjusting and holding the stair in position.

## Teak

Walking surface is supplied with 4 mm teak and the lower platform with a grating.
